

Table 1. Previous Literature on Pediatric Concussions

Summary of prior studies examining psychiatric, behavioral, and substance-use outcomes after concussion exposure.

Age range (years)	Sample size (n)	Follow-up period	Concussion exposure	Outcome measures	Main findings
12-18	48	Within 21 days	Single concussion	Barratt Impulsivity Scale (BIS); Generalized Anxiety Disorder-7 (GAD-7); Patient Health Questionnaire-9 (PHQ-9)	Higher depressive symptom scores and increased attention impulsivity were observed following concussion.
5 to <18	115	2 weeks (acute); 3 months (post-acute)	Single concussion	Child Behavior Checklist	Increased internalizing and externalizing behaviours, as well as overall mental health problems, were reported.
>18	204 (84.3% with concussion)	15 years post-football career	>=3 vs 0; >=3 vs 1-2 concussions	Mental Composite Score (MCS); PHQ (depression module); CAGE questionnaire	Individuals with >=3 concussions had lower MCS scores (<50) and higher rates of moderate to severe depression; no association was observed with alcohol dependence.
5-18	152,321	Not reported	Single concussion	National healthcare database	Concussion was associated with increased risk of mental health conditions, self-harm, and psychiatric hospitalization; no difference was observed in death by suicide.
10-18	2,082	11-16 years	Single concussion	Linked population-based datasets	Increased risk of mental health disorders, including mood disorders, psychosis, and substance use disorders; increased risk of ADHD in females; no association with suicide attempts.
<18	3,427 (19.5% with concussion)	Past 12 months	Single concussion	Youth Risk Behavior Surveillance Survey (YRBSS)	Concussion was associated with higher odds of self-harm, depressive symptoms, and injury resulting from suicide attempts.
Adults	105	4-7 years	0, 1, or >=2 concussions	Depression Anxiety Stress Scales (DASS-42)	Greater concussion exposure was associated with increased symptoms of anxiety, depression, or both.

Abbreviations are retained as reported in the source table. This table reflects the literature entries visible in the provided image.
